FINISHED SURFACES FOR THE SHOWER SPACE – MULTISTAR® VISION^{PLUS} SPICES UP YOUR BATHROOM

For all those who want the niche and wall trim in the shower to look like glass, SCHEDEL offers the extra thin surface MULTISTAR® VISION^{PLUS}. The thin plates are particularly suitable for refurbishment in the wet area. Individual on-site blanks for fittings are possible at any time. The VISION^{PLUS} wall panels are currently available in four high-gloss and matt colours.

Suitable for the renovation of mirror tiles

The MULTISTAR® VISION^{PLUS} panels are 100% flexible since they are available as large-format panels, size 2,800 x 1,300 mm. Thanks to their slender laminate structure, they are only 4 mm thick and are ideal for the refurbishment of mirror tiles. A further argument for simple and fast refurbishment or installation is that the panels are flexible to saw and drill. The MULTISTAR® VISION^{PLUS} can be easily processed and customised with standard wood processing tools. The panels also feature a high breaking and scratch resistance. The choice of colours – Perla, Magnolia, Fumo and Sabbia – are based on the current trends of contemporary bathroom design and are both simple and elegant.

Discreet aluminium profiles as accessories are included in the program, which offer the optimum edge finish for

different wall situations. The matching construction adhesive for metal/wood/tile and masonry can be likewise included in the order.

Shower area with plus factor - ground flush and jointless!

Barrier-free shower area plus jointless surface – the product line of MULTISTAR® BODENESEN^{PLUS} makes it possible. An appealing tactile surface of mineral material provides optimum comfort as well as surefootedness and stability in the shower. Eight different colours offer leeway in terms of design. BODENESEN^{PLUS} is available with three different drainage systems: point drainage, line drainage or wall drainage. PLAN^{PLUS} stands for point drainage. The board has a standardised drainage opening of 90 mm, so that all common drainages can be used. LINE^{PLUS} is already equipped at the factory with a channel. The channel cover, likewise made of mineral material, completes the design and ensures a homogeneous shower area. The WALL^{PLUS} system is ready for installation of the GEBERIT Sanbloc wall drainage. The drain can be installed either in a wall or in a seat. Depending on the drainage version, you can choose the shower systems in many standard dimensions. There are also special installation solutions feasible that are adaptable to the specific spatial situation. The boards are factory-equipped with a waterproof fibre layer with an overhang of 70 mm all-round for sealing to the floor screed and wall. So the boards can be adapted to the given screed heights on the construction sites, the systems include sub-elements of different heights. For PLAN^{PLUS}, a substructure with special quadroU technology is available in addition to the conventional substructure. The assembly is done quickly and neatly using installation foam.

Jointless surfaces for SCHEDEL bath modules

Additional design aspects open up with the bath modules from the MULTISTAR® VISION flexible bathroom design range. Factory-provided jointless coated elements such as seats or wall modules with niches round out the individual bathroom design and offer leeway for creativity and feel-good atmosphere. For those who are looking for a seat in the shower, SCHEDEL offers a variant with wall drainage in a seat. The seat can also be equipped with a jointless mineral material surface.

SCHEDEL BAD + DESIGN GMBH

The SCHEDEL family business with South African origin can refer to more than 40 years of experience in EPS (expanded polystyrene) processing. By implementing its own product line MULTISTAR® the production of tub supports began in 1993. Today the SCHEDEL Bad + Design business offers its customers an extensive range of products: MULTISTAR® shower and tub supports, MULTISTAR® floor-level system solutions, MULTISTAR® steam cubicles with an integrated shower area and MULTISTAR® DESIGN - customised design elements made of EPS (expanded polystyrene). The company sees itself as a system provider offering tailor-made solutions to make individual high-comfort baths possible for any installation situation. To be as close as can be our customers our support service also plays an important role.

With innovation and the highest level of "Made in Germany" quality, we at SCHEDEL Bad + Design ensure attractive and premium products.
